

ORDR IQ for Transportation

Transportation systems never stop moving. Aircraft turn over in minutes, fleets operate across vast geographies, critical OT systems keep schedules on track, and every connected asset; from gate systems to baggage scanners to onboard networks, creates opportunity as well as risk. ORDR brings control to that complexity with a platform built to see every asset, understand its behavior, and protect operations without slowing them down. And with ORDR IQ, your team gains the intelligence and speed to stay ahead of threats in environments where uptime isn't optional. This is security built for transportation: fast, resilient, and grounded in real operational truth.

INTELLIGENCE: AI Protect for Security

See Every Asset. Understand Every Pathway.

Transportation environments struggle not because they lack data, but because they can't see the full range of connected systems that matter most. ORDR identifies every asset the moment it touches your network, from airport terminal systems and gate control equipment to onboard Wi-Fi, ground operations devices, logistics scanners, mobile fleets, operational OT, and cloud-connected applications.

By understanding how each asset behaves and where it communicates, ORDR exposes hidden risks early and stops lateral movement before attackers reach mission-critical operations.

ACTION: AI Protect for Segmentation

Turn Intelligence Into Zero Trust Segmentation.

When your business depends on precise schedules and uninterrupted operations, downtime simply isn't an option. ORDR delivers clinically safe, operationally sound Zero Trust enforcement in high-scale, high-pressure environments.

With millions of flows analyzed daily and deep integration across multi-vendor NAC and firewall ecosystems, segmentation becomes reliable, repeatable, and aligned to transportation workflows.

No agents. No downtime. No operational friction. Just safe, scalable Zero Trust enforcement that protects operations across terminals, fleets, and distributed sites.

ORCHESTRATION: ORDR IQ

The AI Orchestration That Makes Teams Faster.

ORDR IQ uses the telemetry, device intelligence, and behavioral patterns already collected by ORDR to deliver expert-level answers in seconds. It doesn't guess. It understands.

Whether pinpointing exposed gate systems, isolating rogue IoT devices in terminal networks, analyzing aircraft-adjacent communication paths, or drafting segmentation plans for logistics hubs, IQ accelerates every workflow without adding agents, probes, or infrastructure. Threats move fast. With IQ, your team can move faster.
